TEXMA

TEXMA Textile Management System is a software that offers a diverse range of interconnected modules designed to support best practices specifically in the textiles industry. These modules provide real time information entry, maintenance, tracking and intelligence facilities to users. TEXMA is fabricated around the overall objectives of providing a flexible, user-specific work environment within management defined limits. It aims to execute better task control, coherence and efficient time utilization along with stringent data security and integrity. TEXMA Textile Management System enables to provide strategic management analysis, planning and decision support tools based on the critical routine and operational variables prevalent in the textile industry work culture. This software is recommended for small / Medium business stores and works on any Microsoft Windows based personal computers. For complete information on the product please feel free to contact us for a free demonstration program or call on +971 55 101 7383 for appointment.
